Introduction to Data Mining - University of Minnesota

The following are examples of possible answers. • Clustering can group results with a similar theme and present them to the user in a more concise form, e.g., by reporting the 10 most frequent words in the cluster. • Classification can assign results to pre-defined categories such as "Sports," "Politics," etc.

8 and Cyclones Winds, Storms

the land breeze in Chapter 4. In summer, near the equator the land warms up faster and most of the time the temperature of the land is higher than that of water in the oceans. The air over the land gets heated and rises. This causes the winds to flow from the oceans towards the land. These are monsoon winds (Fig. 8.9).
