computation of exposure have been brought up to date. A section on standards for intake of radionuclides has also been added. In Chapter 11, Reactor Licensing, Safety, and the Environment, the sections on dispersion of effluents and radiation doses from nuclear facilities have been considerably expanded to cover new concepts and situations.

computation on a supercell with a very large size. Thus, it is a common practice to employ the translational symmetry by solving the Hamiltonian in the momentum space (k-space). In Eq. (2), we note that $k_p k_q = 0$ and $k_{p+k} r k_s k_q = 0$ owing to the translational symmetry (this is preferred as the conservation of crystal momentum).
